

Noble Growth Fund UCITS

Fund Description

Noble Growth Fund (the Fund) is a commodity focused fund based in the Principality of Liechtenstein, an attractive European Jurisdiction.

The investment objective of the fund is to achieve long term capital appreciation via investment exposure in real assets, digital assets and associated technologies and infrastructure. The correlation of the portfolio is expected to be low or negative to traditional asset classes.

Portfolio Comment

The strategy thesis: In the long run, fiat currencies will diminish in value as central bankers will fail to exercise monetary and fiscal responsibility. In this environment, real assets and digital assets will outperform. Precious metals and digital currencies will increasingly fulfil the store of value and medium of exchange functions and will grow in importance as part of the global monetary base. The Noble Growth Fund was set up to give investors access to precious metals, mining stocks, blockchain technologies and eligible digital assets.

The fund performance in December was positive by 9.32%. The price of Gold has rallied 7% from its November low. Silver has rallied even more, up 17% for the month of December. Mining stocks which represent a geared play on the price of Gold rose by 4%. Bitcoin continued to trend higher and we have sold some to take profits. With the price of Gold still well below its August peak, this is probably a buying opportunity for the asset class.

Governments around the globe are deploying massive amounts of fiscal and monetary stimulus. The scenario is playing out in accordance with the theme of the Noble Growth Fund: Governments will do whatever it takes to avoid a severe or prolonged recession. Their actions will ultimately be inflationary and they will have neither the ability nor the will to seriously fight inflation when it does come. In this environment, Gold and Digital Assets will perform very well relative to fiat currencies.
